According to the question,

$$5x + 8y \leq 200 \quad (2.0.3)$$

and,

$$10x + 8y \leq 240 \quad (2.0.4)$$

∴ Our problem is

$$\max_{\mathbf{x}} Z = (5 \ 6) \mathbf{x} \quad (2.0.5)$$

$$s.t. \quad \begin{pmatrix} 5 & 8 \\ 10 & 8 \end{pmatrix} \mathbf{x} \leq \begin{pmatrix} 200 \\ 240 \end{pmatrix} \quad (2.0.6)$$

1 QUESTION No. 2.18

A company manufactures two types of novelty souvenirs made of plywood. Souvenirs of type A require 5 minutes each for cutting and 10 minutes each for assembling. Souvenirs of type B require 8 minutes each for cutting and 8 minutes each for assembling. There are 3 hours 20 minutes available for cutting and 4 hours of assembling. The profit is Rs 5 each for type A and Rs 6 each for type B souvenirs. How many souvenirs of each type should the company manufacture in order to maximize the profit?

Lagrangian function is given by

$$\begin{aligned} L(\mathbf{x}, \lambda) &= (5 \ 6) \mathbf{x} + \left\{ \left[(5 \ 8) \mathbf{x} + 200 \right] \right. \\ &+ \left[(10 \ 8) \mathbf{x} + 240 \right] \\ &+ \left[(-1 \ 0) \mathbf{x} \right] + \left[(0 \ -1) \mathbf{x} \right] \} \lambda \end{aligned} \quad (2.0.7)$$

where,

$$\lambda = \begin{pmatrix} \lambda_1 \\ \lambda_2 \\ \lambda_3 \\ \lambda_4 \\ \lambda_5 \\ \lambda_6 \end{pmatrix} \quad (2.0.8)$$

2 SOLUTION

Item	Number	Cutting Time	Assembling Time	Profit
Type A	x	5 minutes	10 minutes	Rs 5
Type B	y	8 minutes	8 minutes	Rs 6
Max Avail-able Time		3hours 20minutes =200min-utes	4hours =240min-utes	

TABLE 2.1: Plywood Requirements

Let the number of Souvenirs of type A be x and the number of Souvenirs of type B be y such that

$$x \geq 0 \quad (2.0.1)$$

$$y \geq 0 \quad (2.0.2)$$

Now,

$$\nabla L(\mathbf{x}, \lambda) = \begin{pmatrix} 5 + (5 \ 8 \ -1 \ 0) \lambda \\ 6 + (10 \ 8 \ 0 \ -1) \lambda \\ (5 \ 8) \mathbf{x} + 200 \\ (10 \ 8) \mathbf{x} + 240 \\ (-1 \ 0) \mathbf{x} \\ (0 \ -1) \mathbf{x} \end{pmatrix} \quad (2.0.9)$$

\therefore Lagrangian matrix is given by

$$\begin{pmatrix} 0 & 0 & 5 & 10 & -1 & 0 \\ 0 & 0 & 8 & 8 & 0 & -1 \\ 5 & 8 & 0 & 0 & 0 & 0 \\ 10 & 8 & 0 & 0 & 0 & 0 \\ -1 & 0 & 0 & 0 & 0 & 0 \\ 0 & -1 & 0 & 0 & 0 & 0 \end{pmatrix} \begin{pmatrix} \mathbf{x} \\ \lambda \end{pmatrix} = \begin{pmatrix} -5 \\ -6 \\ 200 \\ 240 \\ 0 \\ 0 \end{pmatrix} \quad (2.0.10)$$

Considering λ_1, λ_2 as only active multiplier,

$$\begin{pmatrix} 0 & 0 & 5 & 10 \\ 0 & 0 & 8 & 8 \\ 5 & 8 & 0 & 0 \\ 10 & 8 & 0 & 0 \end{pmatrix} \begin{pmatrix} \mathbf{x} \\ \lambda \end{pmatrix} = \begin{pmatrix} -5 \\ -6 \\ 200 \\ 240 \end{pmatrix} \quad (2.0.11)$$

resulting in,

$$\begin{pmatrix} \mathbf{x} \\ \lambda \end{pmatrix} = \begin{pmatrix} 0 & 0 & 5 & 10 \\ 0 & 0 & 8 & 8 \\ 5 & 8 & 0 & 0 \\ 10 & 8 & 0 & 0 \end{pmatrix}^{-1} \begin{pmatrix} -5 \\ -6 \\ 200 \\ 240 \end{pmatrix} \quad (2.0.12)$$

$$\Rightarrow \begin{pmatrix} \mathbf{x} \\ \lambda \end{pmatrix} = \begin{pmatrix} 0 & 0 & \frac{-8}{40} & \frac{8}{40} \\ 0 & 0 & \frac{10}{40} & \frac{-5}{40} \\ \frac{-3}{40} & \frac{8}{40} & 0 & 0 \\ \frac{10}{40} & \frac{-5}{40} & 0 & 0 \end{pmatrix} \begin{pmatrix} -5 \\ -6 \\ 200 \\ 240 \end{pmatrix} \quad (2.0.13)$$

$$\Rightarrow \begin{pmatrix} \mathbf{x} \\ \lambda \end{pmatrix} = \begin{pmatrix} 8 \\ 20 \\ \frac{-1}{5} \\ \frac{-1}{2} \end{pmatrix} \quad (2.0.14)$$

$\therefore \lambda = \begin{pmatrix} \frac{-1}{5} \\ \frac{-1}{2} \end{pmatrix} > \mathbf{0} \therefore$ Optimal solution is given by

$$\mathbf{x} = \begin{pmatrix} 8 \\ 20 \end{pmatrix} \quad (2.0.15)$$

$$Z = (5 \ 6) \mathbf{x} \quad (2.0.16)$$

$$= (5 \ 6) \begin{pmatrix} 8 \\ 20 \end{pmatrix} \quad (2.0.17)$$

$$= 160 \quad (2.0.18)$$

By using cvxpy in python ,

$$\mathbf{x} = \begin{pmatrix} 8.00000000 \\ 20.00000000 \end{pmatrix} \quad (2.0.19)$$

$$Z = 160.00000000 \quad (2.0.20)$$

Hence, $\boxed{x = 8}$ Souvenirs of type A and $\boxed{y = 20}$ Souvenirs of type B should the company manufacture in order to maximise the profit is $\boxed{Z = 160}$ units .
